                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:
APPLICANT: Khodadoust, Mehran
APPLICANT: Khodadoust, Mehran
TITLE OF INVENTION: NOVEL MSP-5 PROTEIN AND NUCLEIC ACID MOLECULES
TITLE OF INVENTION: AND USES THEREOF
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHLVE & COCKFIELD, LLP
STREET: 28 State Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Since | Sinc

```
contains heterozygous disruption in a gene encoding TRP
```

```
The present sequence for PCR primer #2 is used to amplify sequences homologous to the T243 gene which encodes for a trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease useful for identifying compounds capable of ameliorating disease. Symptoms, and as test substrates for the identification of divus, pharmaceuticals, therapies and interventions which may be effective in treating trinucleotide repeat discorders e.g. fragile X syndrome and turnington's disease. The animal models for trinucleotide repeat conserved in human disease. Using the mice, it is possible to model both and the pathogenic mechanism and the trinucleotide repeat instability in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 25 BP; 7 A; 6 C; 7 G; 5 T; 0 other;

from an R1 mouse embryonic stem cell genomic library). Gene T243 encodes for a trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal model systems to study the progression of diseases in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The present sequence encodes for murine trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse (alsruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether a knockout mouse. Also described are methods of determining whether a knockout mouse. Also described are methods of determining whether a knockout mouse. Also described are methods of determining whether a knockout mouse. Also described are methods of determining whether a knockout mouse of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for dentifying compounds capable of amellorating disease symptoms, and as test substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating to trinucleotide repeat disorders e.g. fraqile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal model systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide repeat instability in the mouse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present sequence for £243 homologous sequence #2 is generated by PCR is homologous to the T243 gene which encodes for a trinucleotide
                                                                                                                                                                                                                                                                                                                                                                                      cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinuclectide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         test substrates for the identification of drugs, pharmaceuticals, theraples and interventions which may be effective in treating trinuclectide repeat disorders e.g. fraqile X syndrome and Huntington's disease. The animal models for trinuclectide repeat disorders are ideal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel transgenic animals useful as animal model for characterization of function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP -

```
repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heteroxygous disruption in a target DNA sequence (perferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP. where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, pharmacouticals, therapies and interventions which may be effective in treating trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat to vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide repeat instability in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expressed sequence tag; EST; probe; chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antiinflammatory; cytostatic; antibacterial; antifundal; antiinflammatory; cytostatic; antiparkinsonian; antiviral; antidiabetic; antiasthmatic; vulnerary; antiparkinsonian; antiulcer; osteopathic; neuroprotective; nootropic; antipsoriatic;

AMA ANA4326 to AAA45925 represent specifically claimed secreted expressed sequence tags (SESTs), isolated from human, mouse, chicken and rat casequence tags (SESTs), isolated from human, mouse, chicken and rat tissues they were isolated from. The activities depending on the tissues they were isolated from. The activities depending on chemotactic; proliferative; immunomodulatory; haematopoletic; chemotactic; analgeaid; haemastatic; thrombolytic; antinflammatory; cytostatic; analgeaid; antilucer; osteopathic; neuroprotective; antiasthmatic; vulnerary; antilucer; osteopathic; neuroprotective; antiasthmatic; vulnerary; antilucer; osteopathic; neuroprotective; conditionsing and in vaccines. The SESTs are useful as probes for the anticonvulsant; and antidepressant. The SESTs are useful as probes for the condition and isolation of full-length convac of the sest of the molecules which correspond to the SESTs. Proteins encoded by the SESTs of are useful in assays for determining biological activity and raising (multiple sclerosis, insulin dependent diabetes), allorations conditions (stephma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, costeoporosis, osteoartritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disorders (crohn's Crostesse), tumentington's disorders (crohn's correspond to all deficiencies, wounds, burns, ulcers, costeoporosis, osteoartritis, central nervous system disorders (crohn's parkinson's, hartington's disorders (crohn's crostesse), tumentington's disease, strokey, coadulation cold sease), tumentington's disease, strokey, coadulation cold sease), tumentington's disease, tumentington's disease, the morphila, the morphila, fungal or viral infections, depression and the morphila, the morphila of the morphila, the morphila, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                     Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders -

                                                                                                                                                                            This invention describes a novel human polynuclectide that encodes a calcitonin-like polypeptide which has osteopathic, antidiabetic and hypotensive activity and also acts as a vasodilator. Antibodies derived from the product of the invention can be used to isolate and purify the polypeptide sequences. The polypeptides can be used as neuromodulators in a variety of peripheral organs. They can be used in the treatment of paget's disease, hypercalcaemia, and osteoporosis. They can also be used to treat Raynaud's disease, and may be able to inhibit the progression of type I diabetes. The polypeptide sequences may be administered as vasodilators to treat hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel human polynucleotide that encodes a calcitonin-like polypeptide which has osteopathic, antidiabetic and hypotensive activity and also acts as a vasodilator. Sequences AAF93180 - AAF93743 represent polynucleotide sequences encoding human SRT proteins. The cDNA sequences are isolated from various different human tissue cDNA libraries. The invention relates to a method for detecting cDNA encoding an SRT protein, a vector containing cDNA encoding SRT, a host cell transformed with the vector, an isolated SRT polypeptide, and an antibody which binds to SRT. The polynucleotide production of SRT polypeptides, as a hybridisation probe to screen libraries to isolate cDNAs with sequence identity to SRT polypeptides, to map the game encoding the SRT polypeptides and analysing genetic disorders, tissue typing and disease tissue detection. The SRT polypeptides for polynucleotide sequences can be used in polymerase chain reaction,
                                                                                                                                                                                                                        ö
from the product of the invention can be used to isolate and purify the polypeptide sequences. The polypeptides can be used as neuromodulators in a variety of peripheral organs. They can be used in the treatment of paget's disease, hypercalcaemia, and osteoporosis. They can also be used to treat Raynaud's disease, and may be able to inhibit the progression of type I diabetes. The polypeptide sequences may be

The present sequence is the coding region of myocardium secreted protein CC -5 (MSP-5) cDNA which was isolated from a cDNA library prepared from a cardiac tissue sample obtained from a biopsy of a 42 year old woman cardiac tissue sample obtained from a biopsy of a 42 year old woman cardiac tissue sample obtained from a biopsy of a 42 year old woman cardiant activities. It is highly expressed in heart, hypotensive and cardiant activities. It is highly expressed in heart, brain, placentar featlung, liver, kidney, testis, small intestine and cardiular processes, especially cardiac cellular processes, MSP-5 is used to modulate the activity of one or more proteins involved in a cardiovascular disorder, e.g. congestive heart failure or cardiomyopathy. Conditions and diseases which can be treated include hypertension, atherosclerosis, coronary artery spasm, coronary artery disease, valvular disease, arrhythmias, and cardiopathies (e.g. hypertropic, dilative, or restrictive cardiomyopathies), and disorders related to under or over cardiomyopathes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel myocardium secreted protein-5 polynucleotides, used to modulate a

The proteins can have cytostatic.
AAB3661 to AAB36675. The proteins can have cytostatic, anti-inflammatory, haematopoletic, anti-ioogulant, immunomodulatory and hepatotropic activities, and can be used as cell migratory agents, cell proliferation- stimulants and cell differentiation-inducers. The proteins are useful in the treatment and prevention of diseases such as cancer, lung function disorder, liver function disorder, and immune diseases. AAC90716 to AAC90755 represent PCR primers which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; secretory protein; cancer; immune disease; infectious disease; lung function disorder; liver function disorder; antiinflammatory; gastrointestinal disorder; cytostatic; hematopoletic; anticoagulant; immunomodulatory; hepatotropic; cell proliferation-stimulant; cell migratory agent; cell differentiation-inducer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin PC portion (e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ24811-Z24907; amino acid sequences AAY41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides. Specific uses are described for each of the 95 polynucleotides. Specific uses are described for each of the 95 polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated human genes, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Feng P, Soppet DR;

treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the mamuluous of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 29 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, e.g., Alzheimer's disease, Parkinson's disease), conditive disorders, schizophrenia, asthma, altinoiders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound seatuburn, to maintain organs before transplantation, for supporting cell suburn, to maintain organs before transplantation, for supporting cell colluture of primary tissues, to regenerate tissues, to identify their cognate ligande or binding partners, and in chemotaxis, and can be used as a food additive or preservatis, and in chemotaxis, and can be used all and provide or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in the provider or preservative and in chemotaxis, and can be used in the provider or preservative or modify storage properties. In diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention. 8×6666666666666666666666666888

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see the project of this sequence, see the passing the passing of the sequence of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Data from AC093619 was used to finish this clone, AC073842. Polymorphisms have been identified between AC005071 and AC073842. Location/Qualifiers

* NOTE: This is a 'working draft' sequence. It currently consists of 44 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
